2 MAY 2023.

Good Day

Please be advised of the medical procedure followed after an incident or accident:

## PROCEDURE

From the time an incident is reported to either Race Control or the Medics, via the emergency numbers, the matter is then handled by the COC and the CMC.

- The COC will advise the patients ICE contact and pit crew
- The CMC dispatches the closest medical team to the incident
- The patient will be transported to the medical station, where the CMC will take control and prepare the required paperwork
- A medical report form is completed with all the patients information we have on file i.e. Name and surname, date of birth, ID number, copy of the patients MSA license, any allergies listed, Blood Group, ICE contact details
- A **transport** ambulance, based at the medical station, will be used to transport the patient to the hospital nominated by the CMC. Only in the event where the patient is critical, will the route ambulance be used to transport the patient to the closest hospital as nominated by the CMC. The **transport** ambulance will then be dispatched to the loop.
- In the event of a critical incident the CMC will also be dispatched to the scene in the medical response vehicle.
- Critical patients will be transport directly to hospital by road ambulance or by air ambulance.
- Should the CMC believe an air ambulance is required he will liaise direct with Dr. de Beer, the MSA appointed CMO and Race Control. All communication, where possible, is done via mobile phone to minimise radio communication.
- The patient will be admitted to the hospital casualty ward and the medical report form and confirmation letter from the hospital will be handed over, the patient or next of kin will be required to pay a R 1000.00 hospital admission fee. The hospital will open the required hospital file, and hospital procedures then take over.
- The CMC will follow the progress of the patient and liaise with the COC.

Kind regards
